

## **1) "Tell me about yourself"**

Hello, my name is Tetiana.

I'm QA Manual Engineer for 3 years. For my QA experience, I used to work with several different projects and performed various types of testing. For example: Front-End, API and Back-end testing, Functional, End-to-End testing, Black/Gray/White Box testing, Regression, Exploratory and Performance testing.

I use JIRA to submit and track my bug reports and Confluence to work with my project Documentation. Also I did all the documentation myself.

For the Front-end testing, besides manual part, I used Selenium IDE to automate my Regression testing.

I'm also pretty experienced with the Agile/Scrum and Waterfall SDLC methodology, and most of my projects used Slack and Zoom for communication. I have good experience in Git and GitHub.

My goal is to build a successful career as a Software Tester. My strengths are my positive attitude, punctuality and interpersonal skills. And I am always ready to learn something new

## **"My regular working day"**

First of all, I check my mail, JIRA tickets and prepare for a stand-up meeting.

After the meeting, I continue my daily workload by writing Test Cases and updating current Test Cases.

I find out the priority on the stand-up meeting from my Scrum master, from co-workers, in the Jira, by e-mail and continue doing different types of testing based on priority.

If I have free time, I am engaged in self-education and improving my knowledge in testing. At the end of my working day I make a report for myself and my Test Lead on my progress.

Usually after work I spend time with my family.
